Serine/threonine-specific protein kinase (EC 2.7.1.-) isoform I, Rho-associated - mouse C;Species: Mus musculus (house mouse)
C;Date: 29-Jan-1998 #sequence_revision 06-Feb-1998 #text_change 05-Oct-2004
C;Accession: S74244
R;Nakagawa, O.; Fujisawa, K.; Ishizaki, T.; Saito, Y.; Nakao, K.; Narumiya, S.
FEBS Lett. 392, 189-193, 1996
A;Title: ROCK-I and ROCK-II, two isoforms of Rho-associated coiled-coil forming protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    C;Species: Rhizobium sp.

-!- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion.
-!- SUBCELULIAN LOCATION: Secreted.
-!- DISEASE: Defects in PTH are a cause of familial isolated hypoparathyroidism (PIH) [MIM.146200]. FIH exist both as autosom

"Nucleotide sequences of parathyroid gene in five species of macaque
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         J. Sci. Res. Chulalongkorn Univ. 23:135-142(1998).
-!- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                                                                                                                                                                                                                                                                  PROSITE; PS00335; PARATHYROID; 1.

"The amino acid sequence of porcine parathyroid hormone.";
Biochemistry 13:1994-1999(1974).

-i. FUNCTION: PTH elevates calcium level by dissolving the salts in
bone and preventing their renal excretion.

-i. SUBCELLUIAR LOCATION: Secreted.

-i. SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                                                                                                                                          Bukaryota; Metāzoa; Chordata; Craniata; Vertebrata; Buteleostomi;

MELINE-20090619; PubMed=10623601; DOI=10.1006/bbrc.1999.1958; Marx U.C., Adermann K., Bayer P., Forssmann W.-G., Rosch P.; Solution structures of human parathyroid hormone fragments hPTH(1-34) and bovine parathyroid hormone fragment bPTH(1-37)."; Blochem. Biophys. Res. Commun. 267:213-220(2000).

--- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion.

--- SUBCELLULAR LOCATION: Secreted.

--- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NUCLEOTIDE SEQUENCE.

-!- FUNCTION: PTH elevates calcium level by dissolving the salts bone and preventing their renal excretion.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Hypothalamus and parathyroid gland.
-!- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NUCLECTIDE SEQUENCE OF 32-115.

Bone Minar. Res. 3:689-698(1988).
--I- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion.
--I- SUBCELLUIAR LOCATION: Secreted.
--- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDLINE=89219100; PubMed=2710135; Russell J., Sherwood L.M.; "Nucleotide sequence of the DNA complementary to avian (chicken) preproparathyroid hormone mRNA and the deduced sequence of the h

                                                                                                                                                                                                                                                                      NOTE=Ref.1.
-!- SIMILARITY: Belongs to the parathyroid hormone family.
-!- CAUTION: 14 of the 15 residues are identical to an internal region of human parathyroid hormone. That seems quite an incredible
                                                                                                                                                    "Purification and characterization of an ethylene-induced antifungal protein from leaves of Guilder rose (Hydrangea macrophylla).";
Protein Expr. Purif. 24:76-28(2002).
-I- FUNCTION: Has antifungal activity against A.alternate,
A.cucumerina, A.niger, C.gossypii, F.oxysporum, F.oxysporum subsp.
melonis, F.moniliforme, T.cucumeris, and V.dahliae. Has no chitinase or agglutination activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        STRAIN=C57BL/6J; TISSUE=Thymus; MEDLINE=99279253; PubMed=10349636; DOI=10.1016/S0076-6879(99)03004-9; Carninci P., Hayashizaki Y.; Hidjehizaki Y.; Hidjehizaki Y.; Hidjehizaki Y.; Hidjehizaki Y.; Midjehizaki Y.; Midjehizaki Y.; Midjehizaki Y.; Midjehizaki Y.)

-!-FUNCTION: Factor B which is part of the alternate pathway of the complement system is cleaved by factor D into 2 fragments: Ba and Bb. Bb, a serine protease, then combines with complement factor 3b. bb. as of Sconvertase. It has also been implicated in proliferation and differentiation of preactivated B lymphocytes, rapid spreading of peripheral blood monocytes, stimulation of lymphocyte blastogenesis and lysis of erythrocytes. Ba inhibits the proliferation of preactivated B lymphocytes (By

-1- POLYMORPHISM: Two major variants, F and S, and 2 minor variants, as well as at least 14 very rare variants, have been identified.
-1- SIMILARITY: Belongs to the peptidase S1 family.
-1- SIMILARITY: Contains 1 peptidase S1 domain.
-1- SIMILARITY: Contains 3 Sushi (CCP/SCR) domains.
-1- SIMILARITY: Contains 1 VWFA domain.

-!- FUNCTION: Factor B which is part of the alternate pathway of the complement system is cleaved by factor D into 2 fragments: Ba and Bb. Bb, a serine protease, then combines with complement factor 3b to generate the C3 or C5 convertaes. It has also been implicated in proliferation and differentiation of preactivated B lymphocytes, rapid spreading of peripheral blood monocytes, stimulation of lymphocyte blastogenesis and lysis of erythrocytes. Ba inhibits the proliferation of preactivated B lymphocytes (By

This Swiss-Prot entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not
     to generate the C3 or C5 convertase. It has also been implicated in proliferation and differentiation of preactivated B lymphocytes, rapid spreading of peripheral blood monocytes, stimulation of lymphocyte blastogenesis and lysis of erythrocytes. Ba inhibits the proliferation of preactivated B lymphocytes (By
                                                                   SIMILARITY: Cheavage of Arg-|-Ser bond in complement Calpha-chain to yield C3a and C3b, and Arg-|-Xaa bond in complement C3 alpha-chain to yield C3a and C3b, and C5b. SUBURIT: Monomer (By similarity).

SIMILARITY: Monomer (By similarity).

SIMILARITY: Contains 1 peptidase S1 family.

SIMILARITY: Contains 3 Sushi (CCP/SCR) domains.

SIMILARITY: Contains 1 VWFA domain.
